JAKELE J1

25 years **JAKELE**

Master gunsmith workshop with in-house 100 m shooting range

Dear hunters, dear customers,
dear friends of the Jakele product world,

It is once again a great pleasure for me to welcome you at this point. Because it means that you are currently holding our new catalog in your hands, and no edition of it has ever been printed in which we have not been able to report on successful innovations from the Jakele think tank and our workshops. This time I am especially pleased: For the first time we are proud to present the Jakele J1. The J1 is a hunting rifle that sets new standards in many respects and, above all, raises gun technology to an absolutely revolutionary level in terms of safety. Hunting practice around the globe has inspired the J1, almost half a century of professional experience has been put into its development, long-standing traditional craftsmanship and modern material technology have given form to its functions. In the J1, the boldest dreams of our master gunsmith's workshop have taken shape. A perfect shape, in our opinion – perfect for all those who understand hunting as a passion with the highest hunting standards. Get to know our J1, the repeater, and numerous brand-new or tried-and-tested products that will perfect your hunt.

Sincerely yours

Andreas Jakele

JAKELE J1

Safety thought through to the end.

Jakele J1 – the revolution in weapons development

Absolute safety. Intuitive guidance and form to perfection.

The dream image of a hunting weapon – now a reality from the house of Jakele.

Unlock, shoot, lock – the eternal triad!

This command is always with you, occupies the back of the head, demands constant review. Demanded. That is past. Because the Jakele J1 is always relaxed. It is only cocked immediately before firing. A new, patented cocking lever directly on the trigger guard is only moved during conscious aiming. It slides automatically as soon as the hand or fingers are removed from the pistol grip, thereby decocking the weapon.

The J1 concentrates voltage exclusively when it is needed: for firing.

The perfect hunting experience does not consist of one shot. It is formed from many dreamlike moments: The smell of morning mist, the sound of silence, the feeling that breath and heartbeat become one when a piece of game is shot. It is the reverence that is conveyed to the hunted piece by the last bite according to ancient custom and that is experienced in the handed over shooter's break.

These are moments of solitude close to nature and times of great gratitude to creation.

And yet a single moment of inattention, a second of carelessness can turn the dream into a nightmare.

All it takes is one shot that goes off unintentionally.

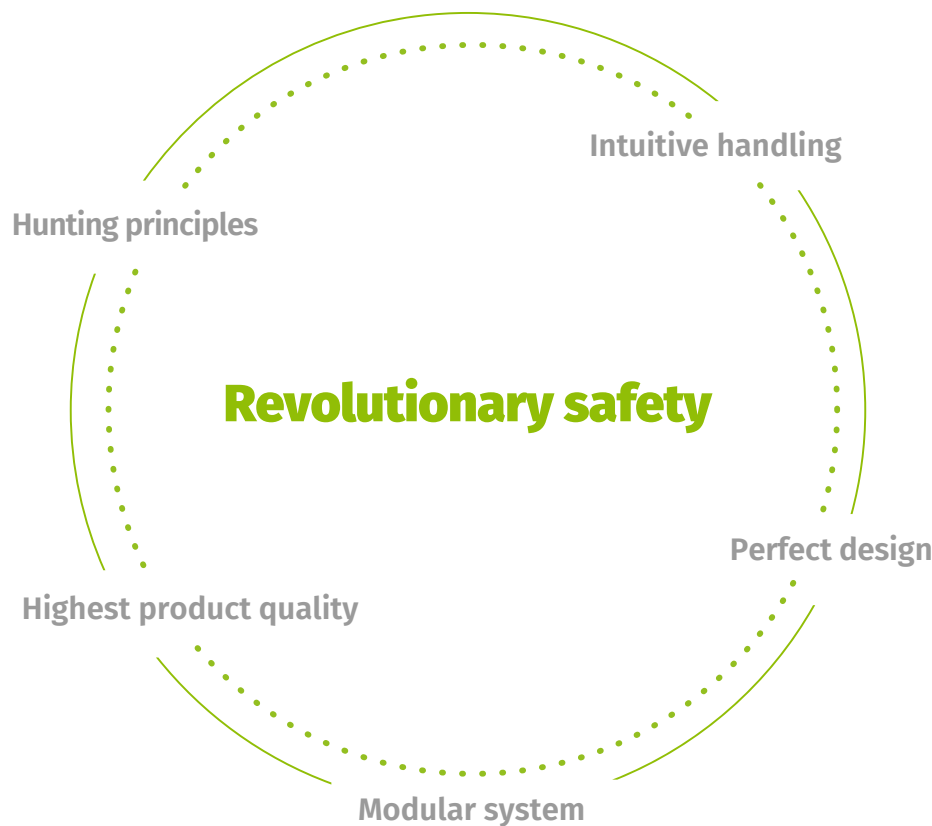

A shot that misses, that kills, that injures. Or just the leaden shock of forgetting to relax or secure the safety catch..

It is enough to know that an accident could have happened to ruin the day and, in the worst case, the life. At best, a fear remains, an uncertainty that overshadows many hunting moments afterwards.

With the Jakele J1, securing or consciously relaxing the hunting weapon is not necessary. Gone. Past. Instead of uncertainty, which is dangerous and stressful, the J1 always offers a relaxed basic state due to the new cocking lever.

Tension only at the moment of firing the shot means Relaxation for all other moments of the hunt.

The Jakele Relax System is nothing less than revolutionized safety. For a clear head, for safe and relaxed hunting.

Jakele J1

Revolutionary safe, extremely guidable, elegant, in highest quality –
for for hunting in line with the law of the hunt.

Revolutionary safety

Jakele Relax-System® with unique preload. Thanks to a revolutionary cocking lever on the trigger guard, the gun is not cocked until it is consciously cocked immediately before firing by pulling the cocking lever to the pistol grip. When the hand is removed from the gun, the cocking lever slides back to its original position. The gun is thus decocked and absolutely safe.

revolutionary safe

Hunting according to hunting rules

The functional design conveys a deeply traditional hunting attitude. The focus is on respect for creation. Both with regard to man and his safety, as well as to the game and hunting.

hunting spirit

Highest product quality

To meet the high quality standards, we use only the best materials and surfaces, from the barrel to the smallest screw. The self-centering four-warts locking mechanism with very large locking surfaces is the heart and guarantor for outstanding precision and robustness. Absolutely silent cocking and decocking of the rifle is a matter of course for us. All essential components are manufactured in Bavaria – Bavarian Precision!

highest quality

guiding

Intuitive guidance

The ergonomic design, short dimension, slim straight pull during the repeating process, low profile and light weight allow intuitive handling and smooth movement from shooting to firing.

Elegant design

The overall lines, the round implementation of the entire system box, the perfectly shaped trigger guard, sloping to the rear, with the cocking lever flowing into it, as well as the trigger located in the trigger guard, with minimal trigger travel, transitioning to the elegant, ergonomic stock shapes make the J1 a real feast for the eyes and hands.

elegant

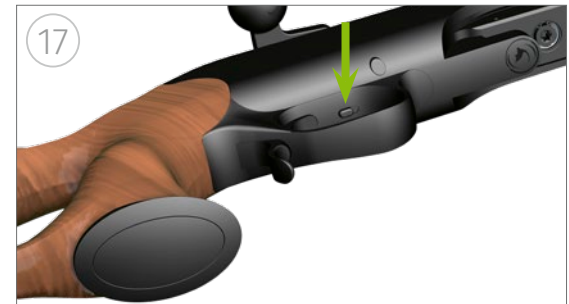

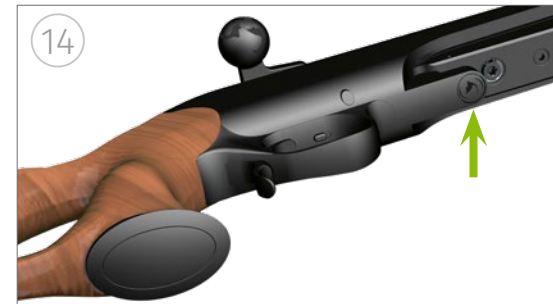

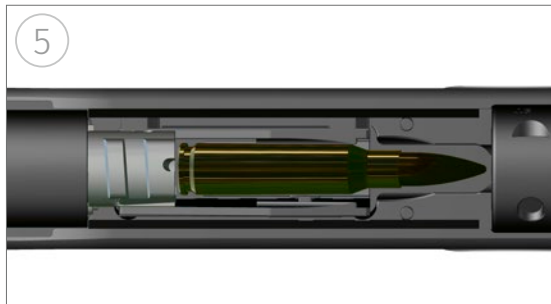

modular

Modular structure

Thanks to the innovative, patented stock attachment, any change of the stock is possible in just a few steps. Interchangeable systems such as barrel and breech can be used depending on the desired caliber. The entire rifle can be easily disassembled into a few modular components using the J1 key integrated in the forearm.

Details and special features

Revolutionary cocking lever - Jakele Relax system

In the Jakele Relax system, safety is thought through to the end. The J1 is only cocked by the innovative cocking lever immediately before firing. For cocking, the middle finger pulls back in an intuitive movement with minimal effort. When the hand loosens - for example after firing or for position correction - the cocking lever slides back to its original position. This automatically decockes the rifle and makes it completely safe.

Compact, light and comfortable to handle

The design is compact but slim. An elegant appearance that convinces with modern ergonomics.

The perfect aesthetics are not only pleasing to the eye, but also make the J1 a lightweight, enormously maneuverable weapon weighing just approx. 2.6 and 2.7 kilograms respectively. And a round-body receiver - a real pleasure to hold.

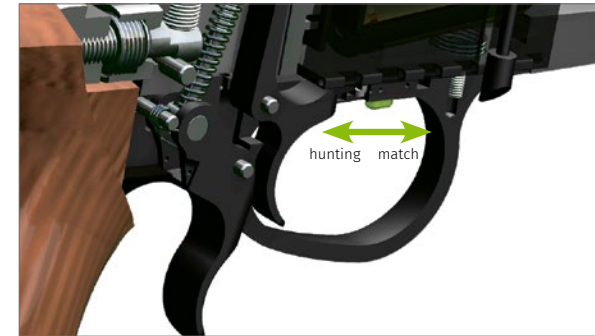

Quick change of the stock

Change the stock in minutes. Depending on the hunting situation, change from wood to synthetic or vice versa in a few simple steps. The patented stock mounting screw is loosened or tightened with the help of the J1 key integrated in the fore-end. The tension-free fore-end mount, maximum temperature tolerance and three-dimensional locks also ensure that the point of impact remains stable when the stock is changed.

Self-centering four-lug locking mechanism

The high-precision, self-centering bolt head with four-locking lugs rotates 90° into the barrel and provides an enormously high locking surface for maximum safety and precision.

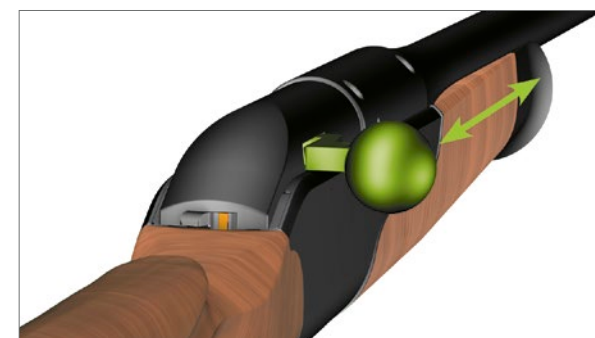

Switchable fine trigger

The trigger itself is always important for an accurate shot. The fine trigger of the J1 impresses with its top characteristics: it is extremely dry and has no creep. The trigger pull is switchable between »hunting« and »match«. The J1 fine trigger is convincing in every position with minimal trigger travel (trigger stop) and is nevertheless completely safe before and after every shot due to the relaxed cocking lever.

Bavarian Precision Mount

With the Bavarian Precision Mount (BPM), one-handed operation is easily possible when mounting and dismounting the scope (the holding hand on the rifle, the other hand remains on the glass) with no more conflicts with elevation turrets of the scopes. The mount locks via a control cam and features extreme strength (also suitable for heavy optical devices) without disturbing the shapely overall appearance of the J1.

Straight pull action

The shapely bolt handle with ball enables fast repeating in straight pull without significantly restricting the view of the receiver. The view of possible engravings is preserved, the overall picture remains coherent.

Highest quality, Bavarian Precision

Quality in detail determines the longevity and value retention of products from Jakele. Many ideas, many years of knowledge and experience and the very highest standards flow together in the development and are implemented with partners who meet the same standards in their field. All essential components are manufactured in Bavaria - this guarantees solid production, a consistently reliable weapon. You can trust that. Trust in Jakele quality.

Revolutionary safety

Innovative clamping lever

Can a hunt be planned from start to finish? Maybe. But that doesn't make it predictable. A lot can happen between the hunt and the draw – you are in nature, in its original state. Terrain and weather, man and animal meet. Natural forces and primal instincts.

The controllable part is the equipment, the most important part of the equipment is the weapon. Why should we accept potential gaps in the security situation here of all places? Or in other words: How safe can a gun be?

With the Jakele J1, you have the greatest possible safety. Thanks to a revolutionary cocking lever on the trigger guard, the gun is only ever cocked when it is consciously cocked. The cocking lever is always pulled to the pistol grip just before firing. If the hand or fingers are removed from the cocking lever, the cocking lever automatically slides back into the starting position.

The gun is immediately decocked and therefore completely safe. Safety for the highest demands. Met by the house Jakele.

JAKELE J1

Intuitive guidance

Shape and design

You don't have to reinvent the wheel – but you must make sure that it runs smoothly!

With the Jakele J1, all "wheels", meaning all components, had to be put to the test. Now the J1 is the tool of choice for routine use in any hunting situation.

A well thought-out ergonomic shape, the short dimension, a low design and the low weight are the basis for intuitive handling.

Few individual parts make assembly simple and fast, leaving many variants to choose from:

Stock sets in wood or plastic are interchangeable. Versions for left-handers and various shortened barrel lengths are available at no extra charge.

Effortless handling also includes the straight pull of the bolt action lever, a switchable fine trigger and the sling swivel full ring (aluminum hard anodized) on the barrel.

An extremely dry fine trigger without creep, the minimal trigger travel (trigger stop) and the extremely low cocking weight maintain the guidance until the shot is fired.
The Jakele J1. A round thing.

JAKELE J1

Perfect shape

Know-how meets design

True beauty comes from within – but it is recognized from the outside. With the J1, that's 100 percent true. It will be recognized. The lines are harmonious, the implementation of the entire system box is coherent – a round body for maximum comfort.

The cocking device is on the inside, the trigger guard slopes down to the rear and the cocking lever is embedded in it. look solid and elegant.

The trigger convinces with the minimal trigger travel and the stock shapes with ergonomic design. The J1 makes no concessions in either form or function.

Because Jakele knows how technical know-how and timeless design can go hand in hand.

When a stock change is required, it can also be done quickly. When the barrel length is adjusted, the rifle sling attachment can also be balanced.

When the silencer is mounted, the wearing comfort may remain optimal and a chamber stem should not hide any refinement. The J1 has found the most beautiful form for every function – therefore: You will recognize it. Everywhere.

JAKELE J1

Highest product quality

Material & Processing

Eiffel Tower, Ulm Cathedral, Colosseum – milestones of their time, milestones that have far outlasted their time. Because their designers thought not only of beauty, but of beauty that lasts.

For the J1, materials and processes were chosen that guarantee longevity: The BDC coating (Bavarian Diamond Coating) of the barrel. The distortion-free inlay of the fore-end stock with integrated J1 key.

The hammered rifle barrel steel with hammered-on cartridge bearing. The spring-loaded barrel mounting nuts (no rattling when the barrel is removed). The bolt with self-centered four-warts locking system and extra large locking surfaces. The three-dimensional barrel receiver with secured point of impact despite oil in the barrel bed.

All factors that testify to forward-looking gunsmithing. The fact that all essential components are manufactured and assembled in Bavaria is a testament to a sense of quality and tradition. In the end, it is the customer's benefit that counts. The extended modular system, for example, bundles the movement sequence in just one component, and the barrel and breech are shot together, regardless of which barrel length is selected from the range.

The optics package is also exemplary: the locking of the scope mount via a control cam is extremely firm, allows heavy optical devices to be mounted without any problems and remains stable even with attachment technology. optical devices and remains stable even with attachment technology. Because no cocking slide is placed under the scope, it can also be mounted very low. Conflicts with elevation towers on the scopes when mounting or dismounting the mount are a thing of the past. a thing of the past.

Once again, what counts in the end is quality. It pays off. Because it is endless.

JAKELE J1

Clear values

The three-shot philosophy

There are three wishes in the fairy tale, it starts on three and all good things are not four, five or ten – they are three. Three shots are not one too many.

Hardly any hunting situation requires more. The magazine of the J1 – two rounds plus a cartridge in the chamber – does not simply transport ammunition. It shows the shooter's huntsmanlike attitude, it proves that a thinking, responsible and considered mind is at work.

Behind the Jakele J1, with its deliberately non-removable magazine with quick discharge, is a person with a clear attitude and deeply hunting values. It is a tool for righteous hunting.

With the J1, hunting is not about ambition, but about reverence. Respect for creation, respect for nature and game, care for the safety of all those involved in a hunt. These beliefs are expressed in the rifle itself. The three-shot philosophy is visible in the design: slim, elegant, highly functional and easy to handle. The J1 is a three-fold statement on hunting according to hunting rules and says from the shot to the shot: I know it – I want it – I can do it!

JAKELE J1

The weapon of a woman

Perfected for hunting

Women are different from men. On average, they have a different arm angle than men, they have a lower center of gravity, they have a smaller muscle fiber cross-section and lower absolute strength, they are said to be more sensitive and more empathetic - according to the statistics. The most common consequence that engineers and developers of all countries draw from this: Shrink products, pink name, bow around it: done! And what exactly are women supposed to gain from this?

In the master workshop of the House of Jakele, the gunsmiths have designed a new hunting weapon, the J1.

With the J1, they have presented a revolutionary weapon. The J1 is lightweight, practically a featherweight of around 2.6 kilograms depending on the version. It is ergonomically optimized so that it literally fits in the arm and hand.

The compact shape, the round-body receiver plus Bavarian Precision Mount for one-handed scope mounting guarantee leading elegance. Easy stock shortening up to 330 mm and quick stock changes simplify many hunting situations. The greatest and most important relief, however, is the new cocking lever on the trigger: the J1 is cocked easily and intuitively with the middle finger immediately before firing, with negligible effort.

And what do the female hunters get out of it?

Just as much as the hunters! When safety, manageability and design meet absolute requirements, body size is irrelevant. When a new solution revolutionizes an industry, it does not do so with muscle mass. In short, the J1 is a woman's ideal weapon. Not because it's dressed up for ladies, but because it's been perfected for hunting.

JAKELE J1

Everything at a glance

A new weapon must be able to answer many questions:

What can it do?

How good?

Does it add value?

Also for me?

The J1 ...

... is suitable for beginners, made for experienced hunters and perfected for professional hunters. The dream image of a weapon has become a reality.

... so that hunting accidents are just sad history in the future. Revolutionary safety for relaxed hunting.

... because functionality and leadership are based on a value attitude. The three-shot philosophy unfolds an elegant design.

... by executing breakthrough innovations in the highest quality materials and manufacturing. Quality that pays off for beauty that lasts.

JAKELE J1

Jakele target stick Z4

for the safe shot –
even over long distances

Z4 – the target stick for all cases

An A380 has the most seats, 4K offers excellent picture quality, and there are a few hundred horsepower between a 911 and a 2CV – any questions? Probably not. And why? Because these numbers and letters are by no means simply model types, serial numbers or size specifications, but stand for legendary examples of their guild.

The Z4 aiming stick from Jakele can keep up in terms of technical mastery. The Z4 (aiming with 4 legs) is the first choice when it comes to safe hits in various types of attacks, it is also ideal for shooting at long range, is ideally suited as an observation stand and is closed an exemplary mountain stick.

The individual height of the Z4 is flexibly adjusted by changing the distance between the two legs for the front and rear stock rests. This makes numerous shooting positions possible.

Positions that are always chosen by the shooter and not dictated by the terrain, because the 2-point rest always guarantees enormous stability.

Sheathed aluminum, extremely UV-resistant rubber fittings, optimum grip and exceptionally quiet construction – the Z4 is solid in every detail and designed for durability. With its carbon look design, it also makes a good visual impression and offers pleasant wearing comfort, even in cold winter temperatures.

Three basic sizes fit every body size (short – up to 174 cm, medium – from 175 to 190 cm and long – for all from 191 cm) and in an extra short version with 125 cm stick length the Z4 is suitable for the seated stop.

This target stick for all cases, a multi-talent “Made in Germany” trades as patent no. 102013201478 – or you forget number and designation and simply say: The Z4 from Jakele.

Jakele target stick Z4 II

The safe hit in different stroke types even at long distances

The individual elevation adjustment is made flexibly by changing the distance between the two legs for the fore-end and buttstock rests and thus offers a variety of shooting positions, completely independent of the terrain.

The movable fork for the fore-end rest allows an adjustment range of approx. 50 m at a distance of 100 m. The enormous stability provided by the 2-point rest makes the Z4 an indispensable companion in almost all hunting situations. Also ideal for use as an observation tripod. Closed, it can be used as a robust mountain stick.

- material: aluminum, sheathed
- absolutely silent
- pleasant wearing comfort, even at winterly cold temperatures
- optimal grip (non-slip)
- all rubber fittings made of extremely UV-resistant material
- visually appealing design (carbon look)
- sizes target stick:
 - short – height up to 174 cm
 - medium – height 175 - 190 cm
 - long – body height from 191 cm
 - extra short – stop type sitting / 125 cm stick length
- made in Germany, patent no. 102013201478

Jakele BPM-Mounts

Bavarian Precision Mount

With the Bavarian Precision Mount (BPM), one-handed operation is easily possible when mounting and dismounting the scope (the holding hand on the weapon, the other hand remains on the glass) with no more conflicts with elevation turrets of the scopes. Because the locking levers do not extend beyond the mount, this can also be mounted very low.

The mount locks via a control cam and features extreme strength and also allows heavy optical equipment to be mounted without any problems and remains stable even with attachments, without disturbing the shapely overall appearance of the J1.

The advantages at a glance

- shapely mounting allows ZF mounting in low height
- clearly defined locked and unlocked position of the locking levers
- the breech levers can no longer conflict with the elevation turrets or abut the left side turrets of a scope
- the BPM allows one-hand operation when mounting/ removing the scope
- the locking is done via a control cam, not via a thread. This also allows the mounting of heavy optical equipment
- compatible with Blaser models from 1993 onwards
- available for Swarovski SR rail, Zeiss VM rail and as ring mounts with 30 mm or 25.4 mm rings

Application example – delivery takes place without riflescope
