STUDI SULL'URANIO E SUA GENOTOSSICITA'

Handbook of Chemistry and Physics, The Chemical Rubber Co., 50a edizione, 1969 – '70. Il manuale è stato ed è un testo di riferimento per generazioni di scienziati e ingegneri; viene aggiornato ogni due anni.

U.S. General Accounting Office, Operation Desert Storm: Army Not Adequately Prepared to Deal With Depleted 16 Uranium Contamination, GAO/NSIAD-93-90, 29 gennaio 1991.

Headquarters U.S. Army Armament, Munitions and Chemical Command, “Memorandum on DU to Persian 17

Gulf Commanders, 07 marzo 1991 - [in BUKOWSKI G., LOPEZ D.A. Uranium Battlefield Home and Abroad: Depleted Uranium use by the U.S. Department of Defense, Citizens' Alert, Reno, NEVADA, marzo 1999, pp. 91-94].

Handbook of Chemistry and Physics, The Chemical Rubber Co., 50a edizione, 1969 – '70. Il manuale è stato ed è un testo di riferimento per generazioni di scienziati e ingegneri; viene aggiornato ogni due anni.

Army Environmental Policy Institute (AEPI), Health and Environmental Consequences of Depleted Uranium Use 19 in the U.S. Army: Technical Report, giugno 1994, pag. 78. Il Rapporto è stato stilato su richiesta del Congresso degli Stati Uniti.

PARKER R.L., “Fear of Flyng”, in Nature, Vol. 336, 22-29, dicembre 1988, p. 719/720 :

ISOTOPO: ciascuno di due o più atomi dello stesso elemento i cui nuclei contengono lo stesso numero di protoni ma 21 numeri diversi di neutroni. Per esempio, l'idrogeno ha tre isotopi: idrogeno (1 protone, 0 neutroni), deuterio (1 protone, 1 neutrone), trizio (1 protone, 2 neutroni). La maggior parte degli elementi esistenti in natura consistono di una miscela di più isotopi. (Dizionario enciclopedico dei termini scientifici della Oxford University Press, Ed. Biblioteca Universale Rizzoli, Ottobre 1990).

DIETZ L.A., Investigation of Excess Alpha Activity Observed in Recent Air Filter Collections and Other 22 Environmental Samples, CHEM-434 - LAD, rapporto tecnico non classificato. Knolls Atomic Power Laboratory, Schenectady, NY 12301, 24 gennaio 1980.

BUKOWSKI G., LOPEZ D.A., Uranium Battlefield Home and Abroad: Depleted Uranium Use by the U.S. 23 Department of Defence, Citizens' Alert, Reno, NEVADA, marzo 1991, p. 59.

Emivita o Tempo di Dimezzamento: tempo necessario per il decadimento della metà dei nuclidi originari. 24 (Dizionario enciclopedico dei termini scientifici della Oxford University Press, Ed. Biblioteca Universale Rizzoli, Ottobre 1990).

I dati sulla emivita (tempo di dimezzamento) degli isotopi dell'Uranio provengono dalla 14a edizione della tabella sui 25 nuclidi e gli isotopi, 1989, GE Co Nuclear Energy Operations, 175 Curtner Avenue, M/C 397, San JOSE, CA 95125.

ICRP (International Commission for Radiation Protection), Individual Monitoring for Intakes of Radionuclides by 32 Workers: design and interpretation, Pubblicazione 54, Pergamon Press, Oxford 1988 e successivi aggiornamenti.

Rem e millirem: (roentgen equivalent man). E' l'unità di equivalente di dose che si verifica quando la dose di 33radiazioni ionizzanti assorbita, moltiplicata per un dato fattore adimensionale, è uguale a 1 J Kg⁻¹. Nel Sistema Internazionale (SI) è pari a 10⁻² sievert (Sv). Poiché diversi tipi di radiazione causano effetti diversi nei tessuti viventi, si usa una dose assorbita ponderata, detta appunto equivalente di dose, la cui dose assorbita viene modificata moltiplicandola per dei fattori adimensionali

stabiliti dalla Commissione Internazionale per la Protezione Radiologica (ICRP: International Commission for Radiation Protection).

SKOGMAN D.P., Headquarters, U.S. Army Armanent, Munitions and Chemical Command, Rock Is. citato in BUKOWSKI G., LOPEZ D.S., Uranium Battlefields Home at Abroad: Depleted Uranium Use by the U.S. Department of Defense, Citizen Alert, Reno, Nevada, marzo 1991, p.98.

Rad e millirad: è l'unità di misura della dose assorbita: è la dose che viene assorbita quando l'energia per unità di massa ceduta alla materia da una radiazione ionizzante è di 1 joule per kilogrammo. La nuova unità di misura nel Sistema Internazionale (SI) è il gray (Gy).
